+ ADD

Functional requirement	User story	No of Activity	Team Members
------------------------	------------	----------------	--------------

Setting up service now instances	To set up a ServiceNow instance, whether a personal developer instance (PDI) or a full instance for an organization, the process generally involves requesting the instance, configuring it with necessary data and settings,	2	A Srikanya
Creation of new updates set	A user story for creating a new update set in ServiceNow can be written as: "As a developer, I want to create a new update set so that I can group and track my customizations and configurations." This story focuses on the developer's need to isolate changes, making it easier to manage and deploy them.	3	A Srikanya
Creation of table	This template allows you to lay out vital information about your target personas. By capturing the desires and pain points of your intended audience, your team can design with their needs in mind. This document should be filled in using data and research.	1	A Srikanya
Creation of table daily expenses	With the majority of user stories templates being some form of a table, Excel may be the first place that teams go when it comes to creating a user story template of their own..	4	B Indira
Creation of relationship	A user story is an informal, general explanation of a software feature written from the perspective of the end user. Its purpose is to articulate how a software feature will provide value to the customers	1	B Jhansi
Configure related list on family expenses	configure a related list for family expenses, you'll first need to identify the parent and child tables involved. For example, you might have a "Family" table as the parent and an "Expense" table as the child. Then, you'll define a relationship between these tables, often using a reference field on the child table that points to the parent	1	B Jhansi
Creation of business rules	Business rules are an integral part of User Stories. They describe the processes, definitions and Constraints that apply to an organization. They relate to people, processes, business behavior, and computer systems. They are set up to help the organization achieve its goals.	1	A Sandhyarani
Configure the relationship	A "configure the form" user story focuses on enabling users to customize or adjust a form according to their needs. It emphasizes the flexibility and adaptability of the form, allowing users to tailor it to specific requirements or preferences	1	A Sandhyarani
